COSC 1430 FINAL PROJECT – OPTION 2

ATM MAchine

You have two text file

1. AccountInformation.txt: will contain the Account informations. Formate of the file will be

   account number

   last name

   first name

   balance

   atm access status: active/disable

2. Password.txt : will contain the login information. Foramte of the file will be
   AccountNumber password

At first do the Login then show the menus .

Account Number: _____

Password: _____

Login

Deposit   **withdraw**

Check Balance   **Make a Transfer**

Change Password   **Logout**

You have to implement all this functionality. For each button click open a new user interface to get the appropriate data and show the result.

If a user clicks on the button "Make a Transfer" you should show a GUI that has the account number and amount to transfer.

You are free to add more functionality.

Important:

Please note that all term projects are open-ended questions. In other words, you are free to add any functionally and improve the user interfaces.
